Individual hearing protection

Plugggerz Uni-Fit is a universal hearing protector with a unique filter, which attenuates the noise to a safe level while still allowing excellent communication with your surroundings. The Plugggerz Uni-Fit is configured for specific use, for example for swimming, attending concerts or riding a motorcycle. The Plugggerz can be used more than 100 times. Includes a handy storage case.

The top of the range is Plugggerz Custom-Fit. These custom-made earplugs combine the highest level of comfort with the best level of protection. These earplugs are measured by a hearing specialist. Plugggerz Custom-Fit is available in flexible, soft silicone and hard acrylic.

Attenuation values

Hearing protectors without filters or with 'normal' filters attenuate high tones stronger than low tones. High tones are indeed more harmful. However, with a flat filter the attenuation is approximately the same at all frequencies. In this way, the sound continues to be very natural and there is no loss of sound quality - it's just like turning down the volume a little on the radio! All Custom-Fit products with 2in1 and DM have a flat filter, just like the Uni-Fit Music Premium.

The attenuation values are contained in the manuals supplied and can also be found at www.plugggerz.com/en.

The power of decibels (dB)

Pluggierz earplugs protect the ears from hearing damage and hearing disorders and they also ensure that existing damage or disorders do not deteriorate.

The most common types of hearing damage are:

- Impaired hearing
- Tinnitus (continuous peep or buzzing)
- Hyperacusis (oversensitivity to normal sounds)

This damage or these disorders are often caused by excessive noise. Fortunately, this can be prevented if you protect your hearing properly. And that's an absolute necessity, because in an environment with loud noise you always need to wear hearing protection. 10% of the time without hearing protection already means a 50% loss in protection. And the closer you are to the source of the noise the more harmful it is.

Furthermore, you don't immediately realise that you are suffering from hearing damage so only when you wear earplugs continuously in an environment of loud noises you'll be able to protect your ears properly. Hearing damage is irreversible!

When is noise harmful? The table shows how quickly you run the risk of hearing damage.

80dB	8 hours	City noise
83dB	4 hours	Traffic, handsaw
86dB	2 hours	Extraction
89dB	1 hours	Truck at 10m
92dB	30 min	Tractor
95dB	15 min	Electric drill
98dB	< 8 min	Motorcycle (as driver)
101dB	< 4 min	Factory machine, disco
104dB	< 2 min	Circular saw
107dB	< 1 min	Pop-/rock concert
110dB	< 30 sec	Power saw

Working conditions legislation

The following is included about loud noise in European legislation about working conditions:

- An inventory of harmful noise is to be made and included in the RI&E

At 80dB or higher:

- Individual hearing protection is to be issued to employees
- Periodic employee hearing tests are compulsory
- The provision of information to employees about hearing damage is compulsory

At 85dB or higher:

- Measures at source
- Compulsory supervision to ensure hearing protection is worn
- Compulsory for employees to wear hearing protection

Cleaning

It is important to regularly clean your Pluggerz hearing protectors. The Custom-Fit protectors have a hypoallergenic coating applied and so they repel dirt and are easy to clean, ideally using the Smart Clean Set. This guarantees hygienic use. Remove any earwax from the canal using the earwax hook which is supplied. The Pluggerz hearing protectors must be thoroughly dry before they are placed back into the storage pouch.

Attention: do not clean using aggressive cleaning agents. DM, 2in1 and ER filters are not waterproof and must be removed before cleaning.

Smart Clean Set

This cleaning set ensures hygienic cleaning of otoplastics. The special composition of active ingredients removes all stubborn dirt, even in those places that are difficult to reach. The Smart Clean Set consists of Smart foam for weekly cleaning and Smart tabs for monthly cleaning.

A proper seal is important

Pluggerz Custom-Fit has a seal guarantee. So you know for certain that you are always protected properly because if a hearing protector leaks the level of protection reduces by an average of an extra 6 to 10 dB. And at each 3dB extra the protection reduced by half. Consequently, with a 6dB leak then only 25% of the protection remains!

Causes of leaks are:

- Excessive wax in the ear
- The ear canal has changed, for example due to old age or weight change
- The ear protector is damaged

Acrylic or silicone earplugs?

Pluggers earplugs are available in two different materials. The hard earplugs are made from acrylic and the soft earplugs are made from silicone. Each material has its own benefits. Most people find hard ear protectors more comfortable, but that's not the case for everyone. The most suitable for sleeping is the 'super soft' silicone earplug, especially if you sleep on your side. The best choice for you depends on your wishes and personal preferences. Both materials are available in a range of colours - see the table below.

Benefits of acrylic hearing protectors

- Longer lifespan with nano-lacquer coating
- More hygienic and easier to clean
- Better seal therefore fewer rejects during leak test
- Feels cooler if you work in a hot environment

Benefits of silicone hearing protectors

- More colour options
- Flat filters easier to remove for cleaning
- Can also be connected to in-ear speakers (Custom-Fit Music 2in1 and Read 2in1)

Plugggerz Music

Plugggerz Music is an earplug that perfectly meets the wishes of the nightlife public. Hearing is protected, without affecting the experience and the quality of the music. The best choice for the conscious music lover who wants to enjoy his or her hearing long term! For real music lovers we recommend flat filters that do not distort the music.

Pluggerz Road

Noise from an engine and the wind can cause permanent damage to your hearing. The Pluggerz Road has been specially developed to provide you with better protection against this. The unique filter attenuates the harmful noise to a safe level, whilst allowing you to still hear all traffic signals. We recommend Pluggerz Road without grip, because a grip can sometimes become squeezed under your helmet. The Road Com Mic and the Road Com can be connected via a jack-plug to navigation, communication or MP3.

Pluggerz Hobby

If the noise level is too high it can result in permanent hearing loss. If you work regularly in a noisy environment you need hearing protection. Pluggerz Hobby is fitted with a unique noise filter that attenuates harmful noise to a safe level. The major benefit is that you can still communicate effectively with other people and you can still hear all warning signals. If communication is important we recommend the Custom-Fit Hobby DM, which has flat filters that give a more natural sound reproduction.

Pluggers Swim

Water in your ear can be unpleasant and occasionally painful and that's why we have developed the Pluggers Swim, so that you can still enjoy swimming, bathing and showering. These unique earplugs provide a watertight seal of the ear canal when swimming, but still allow you to hear.

Pluggers Travel

People travelling by aircraft are often faced with large pressure differences, which can be experienced as an irritating pressure and can sometimes be painful. The Pluggers Travel has a unique filter and ensures that the pressure on your ear is reduced. Descending and climbing feels much more enjoyable! It also filters out annoying noises. Travelling by plane or through the mountains is therefore a lot more pleasant.

Pluggers Sleep

Do you have trouble with annoying noises that keeps you awake? With the Pluggers Sleep you can count on a comfortable night's sleep. The unique filters ensure that annoying noise is almost completely eliminated, without sealing off your ear completely.

The Custom-Fit Side Sleeper is made from a very soft material (25 or 40 Shore) and is hollow, so it moves smoothly with your ear when you sleep on your side. The Uni-Fit has a soft grip in order to prevent painful pressure points for people who sleep on their side.

Pluggerz Shoot

Hearing protector and communication system in one CENS Com has been designed for connecting to the CENS hearing protection system. This can be achieved using a wireless connection programme with the user's 2-way radio or walkie-talkie, so that 2-way communication is possible.

On average, the noise from a gun is well above the pain threshold. Every shot means a high risk of hearing damage. The more often you shoot, the greater the risk of hearing damage. And hearing damage is permanent. Active protectors attenuate impulse noises (such as gunshots) to a greater level than normal ambient sounds. The CENS Active even amplifies ambient sounds such as fluttering or rustling in the

bushes, it has an extra programme for suppressing wind noise and can be supplied with a communication module, so you can stay in effective contact with your fellow hunters. The impulse filter attenuates constantly to a sound level of more than 100 dB, but at an impulse noise it attenuates more strongly the louder the shot. The attenuation is therefore greater the louder the noise.

Pluggerrz Read

If you don't want to be disturbed by noise from outside when you are studying, working or reading, Pluggerrz Read is the solution. Our earplugs attenuate as much noise as possible, so that you can achieve optimum concentration. Would you like to listen to music while you're working? If so, then the Read 2in1 can be easily connected to the majority of in-ear speakers, for example the Sennheiser CX-1.00, which you can also order from us.

Pluggerz Pro

Hearing damage is occupational disease number 1 in the majority of western countries. Almost 10% of the population has hearing loss. In many cases the cause is exposure to loud noise. Pluggerz Pro prevents hearing damage caused by loud noise. We recommend Custom-Fit Pro DM if communication is important, because this has flat filters in order to deliver the most natural sound reproduction.

BlueCom Pro

BlueCom Pro is a standard communication set with Bluetooth. It works as a hearing protector and as a means of communication.

The benefits:

- Suitable for hands-free communication in noisy situations
- Can be connected to all mobile phones
- The directional microphone suppresses ambient noise which allows speech to be more clearly
- Completely wireless solution

LifeShell Com

LifeShell Com is not a hearing protector. It is a means of communication that is fitted into one of your ears.

The benefits:

- Suitable for all walkie-talkies with air conduction
- Optimum contact with surroundings
- Ideal for police and security personnel

LifeShell Protect Com

LifeShell Protect Com is a combination of a tailored communication tool and a hearing protector.

The benefits:

- Suitable for all walkie-talkies with air conduction
- No need to modify the headset
- Suitable for noisy environments, for example in the security sector
